

European Technical Assessment

**ETA-06/0007
of 01/08/2016**

General Part

Technical Assessment Body issuing the ETA: SGS INTRON CERTIFICATIE B.V.

Trade name of the construction product	EUROFAST®
Product family to which the construction product belongs	Fasteners for mechanically fastened flexible roof waterproofing systems
Manufacturer	VAN ROIJ FASTENERS EUROPE B.V. Jan Tooropstraat 16 NL-5753 DK DEURNE
Manufacturing plant(s)	Laid down in non-published supplement to this ETA
This European Technical Assessment contains	392 pages including 4 Annexes which form an integral part of this assessment.
This European Technical Assessment is issued in accordance with regulation (EU) No 305/2011, on the basis of	ETAG No. 006 Guideline for European technical approval of systems of mechanically fastened flexible roof waterproofing membranes, edition March 2000, amended November 2012, used as European Assessment Document (EAD)
This ETA replaces	ETA-06/0007, issued on 01/03/2016

Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full (excepted the confidential Annex(es) referred to above). However, partial reproduction may be made, with the written consent of the issuing Technical Assessment Body. Any partial reproduction has to be identified as such.

Specific Part

1. TECHNICAL DESCRIPTION OF THE PRODUCT

The Eurofast® products are mechanical fasteners for waterproofing membranes, consisting of metal and synthetic washers with or without integrated sleeve, screws and pins. A survey of the products is given in Annex 1. Drawings of the products and combinations are given in Annex 5.

The fastening systems are marketed separately from the other components of roof waterproofing kits (membranes and possibly thermal insulations). This ETA covers only the characteristics of the Eurofast® fasteners. An additional ETA for roof water proofing systems according to ETAG 006 is necessary to determine the performance of the entire mechanically fixed roof water proofing systems.

The fasteners may be used for all types of waterproofing membranes. The supporting roof structure may consist of profiled steel decks, concrete, aerated concrete, or wood. Eurofast® may be used with membranes installed on a thermal insulation material or directly to the supporting roof underlay.

2. SPECIFICATION OF THE INTENDED USE IN ACCORDANCE WITH THE APPLICABLE EUROPEAN ASSESSMENT DOCUMENT (HEREINAFTER EAD)

Installation and design

General

The fitness for use of this component can only be assumed if installation is carried out according to the manufacturer's instructions. The manufacturer's installation guide forms part of this ETA.

It is the responsibility of the manufacturer to guarantee that the information on the application of its products is correctly given to the users.

Fasteners

In annex 2 the installation instructions for the screws are given. These refer to depth in or below the substructure, the tools and the weight of the tools and the speed (rounds per minute). Care should be taken to vertical positioning of the screws.

Substrates

The substrate onto which the waterproofing kit is to be laid should be sufficiently rigid, dense and dimensionally stable to support the system (membrane and insulation).

In order to support the loads imposed by traffic, insulation materials for use in warm decks should be capable of resisting permanent deformation or damage when subjected to concentrated loads. They should have a dust-free surface and sufficient laminar strength to resist with a margin of safety any stress imposed by wind uplift forces.

When insulation materials with a compressibility of $<0.1\text{Nmm}^{-2}$ (at 10% compression) are used, the membrane may be penetrated by the fastener. This may be prevented by using the "Treadsave" fastener.

Roof materials

The following is a list of recommendations for roof deck materials to receive the mechanically fastened roof waterproofing system.

- *Reinforced concrete.* Where a roof slab of reinforced concrete is designed as the deck, which will directly support the waterproofing, it is preferable to lay the slab to provide adequate drainage falls and adequate provision should be made for drying out the slab. A concrete surface, which is not adequately smooth, or does not provide even drainage falls, should be screeded. The surface of the concrete should be finished with a wood float to provide a reasonably smooth surface free from ridges and hollows.

- *Aerated concrete* The anchoring depth must be minimum 60 mm. Pullout tests are always recommended in light weight concrete.
- *Profiled metal decking*. Metal decking does not provide a continuous supporting surface for the waterproofing system; therefore metal decking shall always be used in conjunction with a continuous support, e.g. insulation material. The thickness of the metal decking shall not be less than 0.70 mm.
- *Timber boarding, including OSB*. Roof decks of timber boarding should be designed using naturally durable wood or durably treated wood. Any method of treatment should be compatible with the kit components. Boarding should not be less than 18 mm nominal thickness, planed, closely clamped together with tongued and grooved joints or closely butted and secured by nailing with nail heads not protruding.
- *Plywood*. Roof decks of plywood should be specified as “water boil proof” bonded veneer plywood and durable or treated with a compatible preservative and should not be less than 19 mm nominal thickness. Plywood for roof decks may be square edged or tongued and grooved. Longitudinal joints should occur on the centre of supporting joists. Cross joists should be staggered and in the case of square edged boarding additional support is required, such as the use of noggin.

If there is doubt about the suitability of the substrate, e.g. on a construction site, a pullout test on site should be performed to verify the performance of the kit (see Annex D of ETAG 006). Furthermore, care should be taken during design that bimetallic corrosion between metal parts, especially between the substrate and the screw, does not occur. Likewise, the use of insulation materials containing substances which can affect the performance of the fasteners shall be avoided.

Packaging, transport and storage

The fasteners shall be handled and stored with care and be protected from accidental damage.

Execution of works

The fasteners shall be installed in accordance with the installation instructions from Van Roij Fasteners Europe B.V. by competent roofing contractors.

Maintenance and repair

The fasteners need no special maintenance.

When replacing fasteners they shall be approved by the manufacturer and covered by the ETA.

3. PERFORMANCE OF THE PRODUCT AND REFERENCES TO THE METHODS USED FOR ITS ASSESSMENT

3.1 Mechanical resistance and stability (ER1)

Not relevant

3.2 Safety in case of fire (ER2)

Cannot determined for the separate fastening system. The reaction to fire is determined for complete waterproofing kits including the membrane and possibly insulation.

3.3 Hygiene, health and the environment (ER3)

Release of dangerous substances

According to the manufacturer's declaration these products do not contain any dangerous substances according to the EU database.

3.4 Safety and accessibility in use (ER4)

The characteristic values of the axial load resistance of the fasteners are given in Annex 3. The fastening systems do not show unwinding phenomena, taking into account the satisfactory field experience. The wind uplift performance of roof waterproofing kits is mainly determined by the roofing membranes. A large number of full scale wind load tests with bituminous and polymeric membranes using the fastening systems from this ETA have been executed in several supports. The complete test reports may be obtained from VAN ROIJ FASTENERS EUROPE BV.

3.5 Protection against noise (ER5)

Not relevant

3.6 Energy economy and heat retention (ER6)

Not relevant

3.7 Aspects of durability

The metal screws and washers used offer a corrosion resistance of 15 cycles according to EN-ISO 6988 ("Kesternich") and the interpretation of ETAG 006, paragraph D.3.1.

The plastic fasteners produced of polypropylene and polyamide meet the aspects of durability according to ETAG 006, paragraph D.3.2.2 (brittleness before and after ageing).

**4. ASSESSMENT AND VERIFICATION OF CONSTANCY OF PERFORMANCE
(HEREINAFTER AVCP) SYSTEM APPLIED, WITH REFERENCE TO ITS
LEGAL BASE**

According to Decision 98/143/EC by the European Commission, the system 2+ of assessment and verification of constancy of performance applies. See Annex V to Regulation (EU) No. 305/2011.

**5. TECHNICAL DETAILS NECESSARY FOR THE IMPLEMENTATION OF THE
AVCP SYSTEM, AS PROVIDED FOR IN THE APPLICABLE EAD**

Details concerning extend, type and frequency of the tests or inspections to be performed within the scope of the factory production control shall correspond to the prescribed control plan, deposited at SGS INTRON Certificatie B.V.

Issued in Culemborg on 01-08-2016
